www.cuzn.com

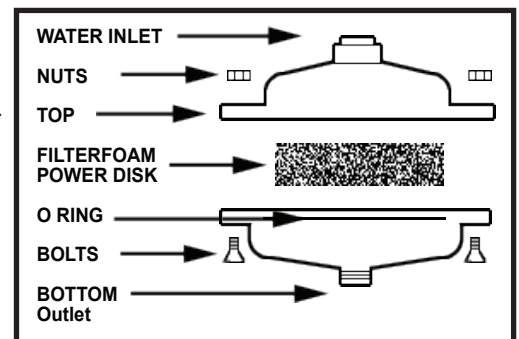

Standard Installation

- 1) Remove existing showerhead from shower arm. If your shower arm has an integral ball joint, replace it with a standard 1/2" shower arm(available at your local hardware store) or call 1800-345 7873 for help.
- 2) Wrap teflon thread sealing tape around the male threads of the shower arm.
- 3) Attach your new TurboShower by threading the inlet half of the filter(female thread) onto the shower arm. **Hand tighten only. Over tightening may crack filter housing!**
- 4) Apply thread sealing tape to the outlet side of your new filter (male threads)and screw on shower head.
- 5) Run hot water through filter for three minutes before first use to activate media.
- 6) Do not use TurboShower with showerheads that have a built in shut-off control. Back pressure may affect filter housing.
- 7) Do not open the TurboShower until it needs to be refilled or warranty may be voided.

Refilling Your TurboShower

- 1) Separate the two halves of the filter by removing the 8 bolts, using hex wrench that came with original filter.
- 2) Remove the old FilterFoam Power Disk, leaving the black O ring in the bottom.
- 3) Rinse out the inside of the filter.
- 4) Make sure the black O ring is in place in the bottom and is smooth and flat, NOT crimped or twisted.
- 5) Insert the new Power Disk into the smaller section, on top toward the water inlet.
- 6) Reassemble the two halves of the filter by tightening the 8 bolts until the two halves are completely closed. Tighten the first bolt, then tighten the bolt across from it. (e.g. 12 o'clock and 6 o'clock).

Your TurboShower Contains

- | | |
|--------------------------------------|--|
| <input type="checkbox"/> KDF-55 disc | <input type="checkbox"/> Activated Carbon disc |
| <input type="checkbox"/> KDF-85 disc | <input type="checkbox"/> Catalytic Carbon disc |

**Keep this information to order
the correct refill for your TurboShower**

Max pressure 150 psi, Max temperature 130F

Limited Warranty

The TurboShower is designed for use on potable systems only. Its effectiveness may be reduced when used on those municipal water systems that use chemicals such as polyphosphates to alleviate water problems caused by high iron content. Do not use with integrated shut-off valves because the pressure build up can cause the filter to split. The manufacturer warrants the TurboShower to be free from defects in materials and workmanship when installed, operated, and maintained in the manner instructed, for a period of one year from date of purchase. The manufacturer will repair or replace any filter that fails to perform due to faulty materials or workmanship during the warranty period. To qualify for this warranty, the filter disk must be replaced at least once every 12 months. Save your receipt. CuZn is not responsible for any damages occurring during the misuse of this product.
